

The plot shows the probability distribution of the number of nodes in the largest component. The x-axis is labeled from 0 to 60 in increments of 15. The y-axis represents probability, with tick marks at 0.0, 0.2, 0.4, and 0.6. The distribution is highly skewed, with a peak at 0 nodes (probability ~0.4) and a long tail extending to 60 nodes. The bars are gray.
