

The heatmap displays a 2D grid with a color scale from 0 to 60. The grid is composed of small rectangular cells. The color intensity is highest (dark blue) in a horizontal band across the bottom right, reaching a value of 60. Other clusters of cells with varying intensities are scattered throughout the grid, including a cluster of high-intensity cells (dark blue) in the top right, and several smaller clusters of lower intensity (light blue) in the top left and middle sections. The overall pattern suggests a complex distribution of values across the 2D space.
