

The figure displays a 10x60 grid where each cell's height represents the frequency of data points. The grid is divided into four quadrants by a vertical line at column 30 and a horizontal line at row 5. The distribution is sparse, with most data points concentrated in the first 10 columns and the last 10 columns. The grid is filled with gray rectangles of varying heights, representing the frequency of data points in each cell. The distribution is sparse, with most data points concentrated in the first 10 columns and the last 10 columns. The grid is divided into four quadrants by a vertical line at column 30 and a horizontal line at row 5.
