

The figure displays a 2D grid of data points, represented by small squares. The grid is approximately 60 units wide and 10 units high. The color of each square indicates a value, with a gradient from light yellow (low values) to dark blue (high values). The highest values (darkest blue) are concentrated in a small cluster in the center of the grid, around x=15-20 and y=5-6. Other smaller clusters of higher values are visible, particularly along the left edge and in the upper right quadrant. The majority of the grid is composed of light yellow squares, indicating low values.
