

The figure displays a 60x60 grid representing the spatial distribution of 1000 data points. The x-axis is labeled from 0 to 60, and the y-axis is labeled from 0 to 60. The data points are represented by gray squares. The distribution is highly non-uniform, with a significant concentration of points in the lower-left quadrant (approximately x=0-20, y=0-20). There are also several smaller clusters of points scattered across the grid, including a small cluster in the upper-left quadrant (approximately x=0-10, y=40-50) and a few isolated points in the upper-right quadrant (approximately x=40-60, y=40-60). The overall pattern suggests a higher density of data points in the lower-left region of the 60x60 space.
