

The figure displays a horizontal bar chart representing the distribution of 1000 simulated values for the parameter α . The x-axis is labeled from 0 to 60. The bars are colored in a gradient from dark gray to black, indicating different quantiles or density levels. The distribution is roughly centered around 10-15, with a long tail extending to the right, reaching up to 60. The bars are arranged in a way that suggests a density or frequency of values at each point along the x-axis.
